BA72 • BA84 Angle Brooms

- Brooms feature a 32-inch diameter brush with 50/50 poly wire brush segments.
- Standard storage stands ensure that brush stays round when not in use.
- Brooms feature standard hydraulic angling with parallel swing arms that allow the broom to stay centered on the skid steer through entire swing.
- Maximum angle 30 degrees left or right.
- Heavy-duty, high-torque drive motor is coupled to the brush core through a one-inch splined shaft.
- During bristle replacement, the drive motor can be pulled from the brush core without disconnecting any hydraulic lines. This means less mess, less cleanup and little chance of hydraulic fluid contamination.
- Brooms feature standard rubber deflector to keep dust down and debris away from the operator.
- Easy to operate. After the initial brush pattern is set, just lower the broom all the way and curl back the Quik-Tatch and you are ready to work.
- Like all Worksite Pro™ attachments, these angle brooms are optimized to work with John Deere 200 Series Skid Steers, and are compatible with most competitive models. See your local John Deere Skid Steer dealer for details.
